

APPENDIX D

Correlation coefficient for the Lognormal distribution

For the 2-parameter Lognormal distributions, sample sizes $n = 3(1)100$, percentile rank = 1%(1%)100% (or p-values = 1(1)100), the raw data of the correlation coefficient (CC) tables are shown in Tables D.1. For the 3-parameter Lognormal distributions, sample sizes $n = 3(1)50$ and $55(5)100$, percentile rank = 1%(1%)100% (or the p-values = 1(1)100), the raw data of the correlation coefficient (CC) tables are shown in Tables D.2.

Table D.1 p-values of the CC for the 2-p Lognormal distribution
