

#### 4. List of collected references

##### 4.1. Books

1. Barlow, R.E.; Proschan, F.  
Mathematical Theory of Reliability  
Wiley & Sons, New York, 1965  
A4.1
2. Blom, G.  
Statistical Estimates and Transformed Beta-  
Variables  
Almqvist & Wiksell, Stockholm, 1958  
M3.1
3. Bonpas-Smith, J.H.  
Mechanical Survival: The Use of Reliability Data  
Mc Graw-Hill Comp., London & New York, 1973  
A4.1
4. Box, G.E.P.; Jenkins, G.N.  
Time Series Analysis, Forecasting and Control  
Holden-Day Inc., San Francisco, 1969  
A4.1
5. Bradt, R.C.; Hasselman, D.P.H.; Lange, F.F. (Edit.)  
Fracture Mechanics of Ceramics  
Plenum Press, New York, 1974  
A2.1.1.2.4
6. Carter, A.D.S.  
Mechanical Reliability  
Halsted Press, New York, 1972  
A4.1
7. Dukes, W.H.  
Handbook of Brittle Material Design Technology  
AGARD-AG-152-71, 1971  
A2.1.1.2.4
8. Elderton, W.P.; Johnson, N.L.  
Systems of Frequency Curves  
Cambridge Univ. Press, 1969  
T1
9. Freudenthal, A.M.  
Fatigue in Aircraft Structures  
Academic Press Inc., New York, 1956  
A4.2.3

10. Freudenthal, A.M.  
International Conference on Structural Safety and Reliability  
Pergamon Press, Inc., New York, 1972  
A4.2.3
11. Gertsbakh, I.B.; Kordonskiy, Kh.B.  
Models of Failure  
Springer-Verlag, Berlin, Heidelberg, New York, 1969  
A4.1
12. Gumbel, E.J.  
Statistics of Extremes  
Columbia Univ. Press, New York, 1960  
T1
13. Gumbel, E.J.  
Statistical Theory of Extreme Values and Some Practical Applications  
National Bureau of Standards, Appl. Math. Series 33, 1954  
T1
14. Harter, H.L.  
Order Statistics and Their Use in Testing and Estimation  
Vol. 1. Tests based on range and studentized range of samples from a normal population  
Vol. 2. Estimates based on order statistics of samples from various populations  
U.S. Govern Print. Off., Washington, 1969  
M3.1
15. Ireson, W.G.  
Reliability Handbook  
Mc Graw-Hill, New York, 1966  
A4.1
16. Johnson, L.G.  
Theory and Technique of Variation Research  
Elsevier Publ. Comp., Amsterdam, London, New York, 1964  
A4.1
17. Johnson, L.G.  
The Statistical Treatment of Fatigue Experiments  
Elsevier Publ. Comp., Amsterdam, London, New York, 1964  
A2.1.2.1

18. Johnson,N.L.; Kotz,S.  
Continuous Univariate Distributions  
Houghton Mifflin Comp., 1970  
T1
19. Kaufmann,A.  
Zuverlässigkeit in der Technik  
Verlag H.Oldenburg, München und Wien, 1970  
A4.1
20. Kuzmin,F.I.; Shor,IA.B.  
Tables for the Analysis and Control of Reliability  
(in Russian)  
Sovjet Book of Statistical and Mathematical Tables,  
1968  
A4.1
21. Locks,M.O.  
Reliability, Maintainability and Availability  
Assessment  
Hayden Book Co., Rochelle Park, 1973  
A4.1
22. Mann,N.R.; Schafer,R.E. & Singpurwalla,N.D.  
Methods for Statistical Analysis of Reliability  
and Life Data  
Wiley & Sons, Inc., New York, 1974  
A3.1; A4.1
23. Meynell,G.G.; Meynell,E.  
Theory and Practice in Experimental Bacteriology  
Cambridge Univ.Press.Second Edit., 1970  
A13.1
24. Murphy,R.B.  
Reliability  
Wiley & Sons, New York, 1963  
A4.1
25. Ohl,H.L.  
Weibull-Analyse  
Schriftenreihe der Adam Opel AG. Nr.9.  
2.Auflage-Okt.1974  
A4.1
26. Sachs,L.  
Statistische Auswertungsmethoden, 3.Auflage  
Springer Verlag,Berlin, Heidelberg, New York,1971  
T1 ; M3.1

27. Störmer, H.  
Mathematische Theorie der Zuverlässigkeit  
Verl. R. Oldenburg, München, 1970  
A4.1
28. Weibull, W.  
Fatigue Testing and Analysis of Results  
Pergamon Press, Oxford, 1961  
A2.1.2.1
29. Weibull, W.; Weibull, G. W.  
New Aspects and Methods of the Statistical Analysis of Test Data with Special References to the Normal, the Lognormal and the Weibull Distributions  
  
M3.1
30. Anonym.  
Sampling Procedures and Tables for Life and Reliability Testing based on the Weibull Distribution (Mean Life Criterion)  
Off. Assist. Defense, Wash. D. C., TR3, 1961  
A3.1; A4.1
31. Anonym.  
Fatigue Testing and the Statistical Analysis of Fatigue Data  
ASTM, STP 91-A, 1963  
A2.1.2.1
32. Anonym.  
Radiation Effects Reliability and Data Analysis  
General Dynamics, Fort Worth, Texas (GE409346)  
Quarterly Progress Letter No. 2, Jul-Sep., 1964  
A4.2.7
33. Anonym.  
The Analysis of Gemini 7  
Detroit Univ., Mich (DN 557315), 1967  
A18
34. Anonym.  
Tables for Obtaining Exact Lower Bounds on Reliable Life under Weibull Assumptions  
Rocketdyne, Canoga Park, Calif., 1968  
A4.1
35. Anonym.  
Qualitätskontrolle in der Automobilindustrie  
Zuverlässigkeitssicherung bei Automobilherstellern und Lieferanten. Verfahren und Beispiel.  
Druckerei Heinrich, Frankfurt am Main, 1976  
A4.1

36. Anonym.  
 American Standard Method of Evaluating Load Ratings  
 for Ball and Roller Bearings  
 ASA, New York  
 A4.2.2

##### Abbreviations

AFFDL	Air Force Flight Dynamics Laboratory, Wright-Patterson AFB, Ohio
AFML	Air Force Materials Laboratory, Wright-Patterson AFB, Ohio
AFOSR	Air Force Office of Scientific Research, Arlington, VA
AGARD	Advisory Group of Aeronautical Research and Development
AIIE	American Institute of Industrial Engineers
AMMRC	Army Materials and Mechanics Research Center, Waterloo, Mass.
AMSAA	Army Materials System Analysis Activity, Aberdeen
ARL	Aerospace Research Laboratories, Wright-Patterson AFB, Ohio
ASCE	American Society of Civil Engineers
ASD	Aeronautical Systems Division, Wright-Patterson AFB, Ohio
ASLE	American Society of Lubrication Engineers
ASME	American Society of Mechanical Engineers
ASTM	American Society of Testing and Materials
EOQC	European Organisation for Quality Control
FFA	Flygtekniska ForskningsAnstalten (The Aero- nautical Research Institute of Sweden), Sockholm
FOA	Försvarets Forsknings Anstalt (The Research Institute of National Defence), Stockholm
ICAF	International Conferences on Aeronautical Fatigue
IEEE	The Institute of Electrical and Electronics Engineers, Inc.

INFOR      Operational Research and Information  
            Processing, Canada

IRE         Institute of Radio Engineers

IVA         Ingeniörs Vetenskaps Akademien, ( The Royal  
            Academy of Engineering Sciences), Stockholm

NACA        National Advisory Committee for Aeronautics

NASA        National Aeronautics & Space Administration

NBS         National Bureau of Standards

SAAB        Svenska Aeroplan AB (The SAAB Aircraft Comp.),  
            Linköping, Sweden

SIAM        The Society for Industrial and Applied Mathe-  
            matics, Philadelphia

TACOM       Tank Automotiv Command, Warren, Mich

VDI         Verein Deutscher Ingenieure

WADC        Wright Air Development Center,  
            Wright-Patterson AFB, Ohio

37. Abernathy, F.I. (1973)  
Methods for the determination of the probability distribution and for the parameters which best describe a set of test data  
Army Mat. Command, Texarkana, ITC (AO 801245)  
M3.4
38. Adams, M.H. (1959)  
Bacteriophages  
Intersci. Publ. New York  
A13.2
39. Adams, N.P.; Hill, H.E. (1974)  
Application of Weibull distribution function in coatings industry  
1. Free film stress-strain properties  
J. Paint. Tech. 46(58), 55  
A15.1
40. d'Agostino, R.B. (1971)  
Linear estimation of the Weibull parameters  
Technometrics 13, 171-182  
M3.2.4
41. d'Alessio, T.; Mericci, G.F.; Rossi, L. (1973)  
The estimation of reliability quantities by simulation methods  
Symp. Reliab. Electronics, Conf. Budapest, 703-713  
A4.1
42. Allen, D.P. (1970)  
The robustness of the student t test when sampling from a Weibull distribution  
Naval Postgraduate School, Monterey, Rep. Sep,  
M1.3
43. Amland, S.G.; Mouland, P.F.; Spanyol, A. (1975)  
A study of replacement policy for commercial pattern vehicles  
Oper. Res. Analysis Establ., Ottawa, Ontario, (409123)  
A5.1
44. Andersson, O. (1951)  
The folding endurance test  
Part I. Statistical aspects  
Svenska Träforskn. Inst., Stockholm, Meddl. Nr. 88  
A2.1.2.2.9

45. Anderson, W.J. (1957)  
Performance of 110-mm-bore M-1 tool steel ball bearings at high speeds, loads, and temperatures  
NACA TN.3892  
A4.2.2
46. Ang, A.H.-S. (1973)  
Structural risk analysis and reliability-based design  
Am.Soc.Civil Engrs 99, 1891-1910  
A4.1
47. Antle, C.E. (1972)  
Choice of model for reliability studies and related topics  
ARL 72-0108; AD 751340  
A4.1
48. Antle, C.E.; Bain, L.I. (1969)  
A property of maximum likelihood estimators of location and scale parameters  
Siam Review, 11, 251-253  
M3.2.3
49. Antle, C.E.; Bain, L.J.; Billmann, P.R. (1972)  
Statistical inference from censored Weibull samples  
Technometrics 14(4), 831  
M3.1
50. Antle, C.E.; Klimko, L.A. (1973)  
Choice of model for reliability studies and related topics II  
ARL-73-0121; AD 772775  
A4.1
51. Antle, C.E.; Dumonceau, R. (1973)  
Discrimination between log-normal and Weibull distributions  
Technometrics 15(4), 923  
M2
52. Antle, C.E.; Klimko, L.A. (1975)  
Choice of model for reliability studies and related topics III  
ARL-TR-75-0133  
A4.1
53. Antle, C.E.; Klimko, L.A.; Rockette, B. (1974)  
Maximum likelihood estimation with Weibull model  
J.Amer.Statist.Ass. 69(34), 246  
M3.2.3

54. Antle, C.E.; Rademaker, A.W. (1975)  
Sample size for selecting the better of two Weibull populations  
IEEE Reliab. R-24(1), 17  
M2
55. Antle, C.E.; Rademaker, F. (1971)  
An upper confidence limit on the maximum of future observations from a Type 2 extreme value distribution  
ARL-73-0022  
M3.3
56. Apt, K.E. (1976a)  
Atmospheric radioactivity data and Weibull distribution function  
T.Am.Nucl.S. 23(Jun), 87  
A7.5
57. Apt, K.E. (1976b)  
Applicability of Weibull distribution function to atmospheric radioactivity data  
Atmos, Envir. 10(9), 777  
A7.5
58. Arimura, I.; Rosenberg C.; Unwin, A.M. (1970)  
Statistical analysis of neutroninduced gain degradation of silico power transistors  
IEEE Trans.Nuclear Sci. NS-17, 160-166  
A4.2.7
59. Armenaikis, A.E.; Garg, S.K.; Sciammarella, C.A. (1970)  
Strength characteristics of glass fibers under dynamic loading  
J.Appl.Phys. 41, 1657-1664  
A2.1.2.2.6
60. Aroian, L.A. (1963)  
Exact truncated sequential tests for the exponential density function  
Reliab.Qual.Control 470-486  
(Available from IEEE)  
A4.1
61. Aroian, L.A. (1965)  
Some properties of the conditional Weibull distribution  
Am.Soc.Quality Control, 19th Ann.Conf., Los Angeles, Calif. 1965, 361-368  
T1

62. Aroian, L.A.; Robinson, D.E. (1966)  
Sequential life-test for the exponential  
distribution with changing parameter  
Technometrics 8, 217-227  
A3.1
63. Baer, G. (1974)  
Die Weibull-Verteilung, ein Hilfsmittel bei  
Kontaktuntersuchungen  
Nachr.-Tech. Elektron, 24(8), 313-315  
T1
64. Bain, L.J. (1972)  
Inferences based on censored sampling from the  
Weibull or extreme-value distribution  
Technometrics, 14, (3), 693-702  
M3.2.4
65. Bain, L.J. (1973)  
Results for one or more independent censored  
samples from the Weibull or extreme-value  
distribution  
Technometrics, 15(2), 279-288  
M3.2.4
66. Bain, L.J.; Antle, C.E. (1967)  
Estimation of parameters in the Weibull  
distribution  
Technometrics, 9, 621-627  
M3.2.4
67. Bain, L.J.; Antle, C.E. (1970)  
Inferential procedures for the Weibull and  
generalized Gamma distributions  
ARL TR 70-0266; AD 718103  
M3.2.3
68. Bain, L.J.; Antle, C.E.; Billman, B.R. (1971)  
Statistical analyses for the Weibull distribution  
with emphasis on censored sampling  
ARL 71-0242  
M3.2.3
69. Bain, L.J.; Engelhardt, M. (1973a)  
Interval estimation for the two-parameter double  
exponential distribution  
Technometrics, 15(1), 875-887  
M3.3
70. Bain, L.J.; Engelhardt, M. (1973b)  
Some complete and censored sampling results for  
Weibull or extreme-value distributions  
Technometrics, 15, (3), 541  
M3.2.3

71. Bain, L.J.; Engelhardt, M. (1973c)  
Interval estimation for the two-parameter double  
exponential distribution  
Technometrics, 15, (4), 875-887  
M3.2.3
72. Bain, L.J.; Engelhardt, M. (1974)  
Some results on point estimators for two-  
parameter Weibull or extreme-value distributions  
Technometrics, 16, (1), 49  
M3.2.3
73. Bain, L.J.; Engelhardt, M. (1975)  
Tests of 2-parameter exponentiality against 3-  
parameter Weibull alternatives  
Technometrics, 17, (3), 353  
M2
74. Bain, L.J.; Hager, H.W. (1970)  
Inferential procedures for the generalized  
Gamma distribution  
ARL-70-0356 W  
M3.2.3
75. Bain, L.J.; Thoman, D.R. (1968)  
Some tests of hypotheses concerning the three-  
parameter Weibull distribution  
J. Amer. Stat. Ass., 63, 853-860  
M3.2.3
76. Bain, L.J.; Thoman, D.R.; Antle, C.E. (1971)  
Maximum likelihood estimation.  
Exact confidence interval for reliability, and  
tolerance limits in the Weibull distribution  
ARL-71-0273  
M3.3
77. Baker, C.; Grisaffe, S.J. (1965)  
Analysis of the shear-bond strength of alumina coatings  
NASA Lewis Res. Centre  
A2.1.1.2.2
78. Balaban, H.S.; Haspert, K. (1972)  
Estimating Weibull parameters for a general class of  
devices from limited failure data  
IEEE Trans. Reliab., 21, (2), 111-117  
M3.2.4
79. Balogh, A.; Dukati, F. (1973)  
Sampling procedures and plans based on the Weibull  
distribution for reliability testing  
Airadastechnika (Hungary), 24, (1), 1-8  
A4.1

80. Band, E.G.U.; Lavis, D.F.; Gianotti, J.G. (1976)  
Prediction of hydrodynamic impact loads acting  
on SES and ACY structures  
Amer.Inst.Aeron.Astron., Adv.Marine Vehicles,  
Conf.Arlington 76  
A4.2.3
81. Bansal, G.K.; Duckworth, W.H.; Niesz, D.E. (1975)  
Strength-size relationships in ceramic materials:  
1. Investigation of a commercial alumina  
2. Effect of flaw shape on strength of ceramics  
Battelle, Columbus, Tech.Rep.Oct 74 -Sep 75  
A2.1.1.2.4
82. Barella, A. (1965a)  
-  
J.Text.Inst., 56, T665-674  
A2.1.2.2.8
83. Barella, A. (1965b)  
-  
J.Text.Inst., 56, T665-674  
M2.1.2.2.8
84. Barella, A. (1966)  
-  
J.Text.Inst., 57, T132-134  
A2.1.2.2.8
85. Barella, A. (1967)  
-  
J.Text.Inst., 58, 78-82  
A2.1.2.2.8
86. Bargmann, R.E.; Tucker, I.R. (1966)  
Association in a class of growth functions  
Illinois Univ., Urbana  
M3.2.3
87. Barnett, R.L.; Hermann, P.C. (1967)  
Wingfield, J.R.; Connors, C.L.  
Fracture of brittle materials under transient  
mechanical and thermal loading  
AFFDL-TR-66-220  
A2.1.1.1; A2.2
88. Barta, Gy. (1976)  
Possibilities of application of theory of  
reliability in instrument engineering  
Finomtech.Mikrotech.(Hungary), 15, (1), 19-25  
A15.2

89. Bartholomew, D.J. (1957)  
Testing for departure from the exponential  
distribution  
Biometrika, 44, 253-257  
M1.1
90. Basile, D.; Volta, G. (1970)  
Statistical parametric and non-parametric methods  
of determining the reliability of mechanical  
components  
Europ. Atomic Energy Com. Ispra (Italy)  
A4.1
91. Bassin, W.M. (1973)  
A Bayesian optimal overhaul interval model for the  
Weibull restoration process case  
J. Amer. Statist. Ass., 68, 575-578  
M3.2.5
92. Basu, A.P. (1975)  
Nonparametric and sequential analysis of life  
testing and reliability problems  
Univ. Pittsburgh. Rep. 1975  
A3.1; A4.1
93. Batdorf, S.B. (1972)  
A statistical theory for failure of brittle  
materials under combined stresses  
U.S. Air Force Contract F0470-1-71-C-0172  
A2.1.1.2.4
94. Batdorf, S.B. (1973a)  
A statistical theory for the fracture of trans-  
versely isotropic brittle materials of moderate  
anisotropy  
Aerospace Rep. No. TR-0074(4450-76)-1  
A2.1.1.2.4
95. Batdorf, S.B. (1973b)  
Fracture statistics of isotropic brittle materials  
with surface flaws  
Aerospace Rep. No. Tr-0074(4450-76)-2  
A2.1.1.2.4
96. Batdorf, S.B. (1974)  
Weibull statistics for polyaxial stress states  
J. Amer. Ceram. Soc., 57, (1), 44-45  
A2.1.1.2.4
97. Batdorf, S.B. (1975a)  
Fracture statistics of brittle materials with  
intergranular cracks  
Aerospace Rep. Oct. 1974  
A2.1.1.2.4

98. Batdorf, S.B. (1975b)  
Observations on approximate and exact treatments  
of fracture statistics for polyaxial stress states  
J. Amer. Ceram. Soc., 57, 44-45  
A2.1.1.2.4
99. Batdorf, S.B.; Crose, J.G. (1973)  
A statistical theory for the fracture of brittle  
structures subjected to nonuniform polyaxial  
stresses  
The Aerospace Corp.-TR-0073, (3450-76)-2  
A2.1.1.2.4
100. Bates, C.B.; Thomas, J. (1976)  
Application of life testing techniques to  
detection data  
Ni-Tec., Inc., Skokie, Ill. (390995)  
A9.3
101. Baumgartner, H.P. (1974)  
Hot pressed silicon nitride in roller bearing  
applications  
Proc. Sixth Nat. Tech. Conf., Dayton  
A4.2.2
102. Bekirogly, H. (1975)  
Simulation research in shuttle transportation  
system  
Bull. Oper. Res. Soc., Conf., 23, (2), 17-18  
A9.1
103. Bekkedahl, J.L.; Maiocco, F.R. (1964)  
Statistical analysis of electronic parts reli-  
ability test data  
North Amer. Aviation Comp., June  
A4.2.7
104. Belbot, E.F. (1974)  
A computer program for estimation of parameters of  
the Weibull system failure rate function  
Army Mat. Syst. Anal. Activity, Aberdeen  
M3.2.3
105. Bell, C.F.; Kamins, M.; Mc Call, J.J. (1966)  
Some elements of planned replacement theory  
Arm. Symp. Reliab., San Francisco  
A5.1
106. Bell, J.E. (1963)  
Weibull distribution in reliability analysis of  
certain electronic components  
Semiconductor Products, 33-36  
A4.2.7

107. di Benedetto, A.F.; Salee, G.; Hlavacek, R. (1974)  
A study of the fatigue behavior of fiber reinforced composites  
Connecticut Univ. Rep.  
A2.1.1.2.7
108. di Benedetto, A.F.; Salee, G.; Hlavacek, B. (1975)  
Fatigue behavior of graphite fiber reinforced nylon 66  
Soc. Plast. Engrs Conf., Atlanta  
A2.1.2.2.7
109. Bennett, G.K. (1970)  
Smooth empirical Bayes estimation with application to the Weibull distribution  
NASA-TM-X-58048  
M3.2.5
110. Bennett, G.K.; Martz, H.F. (1973)  
An empirical Bayes estimator for the scale parameter of the two-parameter Weibull distribution  
Nav. Res. Logist. Q., 20, (3), 387-393  
M3.2.5
111. Benson, M.A. (1962)  
Plotting positions and economics of engineering planning  
Am. Soc. Civ. Engr. J., Hydr. Div. 58-71  
M3.2.1
112. Berens, A.P.; West, B.S. (1971)  
Experimental methods in acoustic fatigue  
Dayton Univ. Ohio Rep., AFFDL-TR-71-113  
A8.1
113. Berens, A.P.; West, B.S. (1974)  
Evaluation of an accelerated characteristic technique for reliability assessment of adhesive joints  
Composite Reliab. Symp., Las Vegas  
A4.2.1
114. Berger, R.W.; Lawrence, K. (1974)  
Estimating Weibull parameters by linear and nonlinear regression  
Technometrics, 16, (4), 617-619  
M3.2.4
115. Berman, M.B. (1971)  
Generating Gamma distributed variates for computer simulation models  
Rand Corp., R-641-PR  
M3.1
